DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 7 are rejected under 35 USC 102(b) as being anticipated by FR889834. Note portable, sealed radiator 4 comprising a plurality of tubular radiator units 5, diathermal fluid therein, electric heating elements 12 in center of the sealed radiator. A fan 25 is disposed above the radiator which directs air "on" the upper portions of the tubular radiator units by aspirating airflow from the bottom towards the top.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) and (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the

Art Unit: 3742

claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 2-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over FR889834 in view of Woolley (US2075323). The claims differ from the previously cited prior art in calling for a centrifugal fan wherein the electric motor driving the fan operates at low rpm. However, as is well known in the art, the speed of the fan in heat radiators is directly proportional to the convective heating effect. That is, driving a fan at higher speed will result in a greater convective heating effect as compared to lower speeds. For example, Woolley (US2075323) on Page 2, lines 19-28 discloses driving a fan in conjunction with a radiator for heating a room at reduced speed (note "half or other partial speed in lines 26-27) depending on the desired temperature setting. In view of Woolley (US2075323), it would have been obvious to one of ordinary skill in the art to provide a reduced fan speed setting in the previously described apparatus so that a reduced convective heating effect was achieved thereby avoiding overheating of the space to be heated. Regarding claim 2, centrifugal fans are conventional and well known in the art in view of their high efficiency and low noise and their use does not constitute a patentably distinguishable characteristic of the invention.

Other Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The art should be both separately considered and considered in conjunction with the previously cited prior art when responding to this action.
